## Segmental Retaining Walls

Segmental retaining walls not only add beauty to your property, they provide lasting value. RMC produces segmental retaining wall systems for the homeowner (which are excellent do-it-yourself projects), as well as systems for the heaviest industrial and commercial use.

[Click here to request a quote](#)

A Mesa Retaining Wall System will enhance the overall value of your property and cost less to maintain than other types of walls. Mesa Gardener Units offer a natural, textured stone appearance and are constructed with high-compression concrete that resists cracking and insect infestation. Other benefits of the Gardener Units include a tight fit and a maintenance-free environmentally friendly system that doesn't require painting or treating with chemicals.

Enhance the beauty of your property with simple do it yourself projects. Mesa Gardener Units are light weight and have unique, recessed hand-holds that make them easy to carry. Walls can be built up three feet high and do not require mortar for construction. Unlike treated lumber and railroad ties, the Gardener Units will not rot, split, or warp, providing you with an attractive wall for years to come.

Do it yourself, or have a Mesa Retaining Wall representative refer you to an installer. The investment will be well worth it, and you will enjoy the beauty and functionality long after your project is complete. Here are a few ideas on how Gardener Units can help improve your property:

Garden Walls and borders  
Sidewalk and driveway edging
