### WELCOME

**TR Gear Body Equipment** - Performance apparel just took on a whole new meaning!

Finally, there is an under garment that give you an athletic advantage over the elements and your competition... with state-of-the-art fabric technology that uses your own thermal regulatory system, sweat, to maintain your body's natural temperature and keep your muscles in a homeostatic environment under any condition, TR Gear addresses significant factors not addressed by current brands. TR Gear does more than just wick the much needed sweat away from your body as other "performance" apparels do; it acts like your own air conditioning and moisture management system.

Our own TR37™ fabric and patented TR Gear™ paneled design proposes a new path for athletes to follow to attain greater power, strength, endurance, flexibility, and comfort in the most extreme conditions while maintaining a consistent body temperature needed to perform at the highest level in one's sport.

#### **Mission:**

Our mission is simple – to change the under apparel industry away from the affects current brands' products have on athletes bodies during activity. Our extensive research shows that the high wicking fabrics currently used in the industry can actually increase the risk of injury, fatigue, overheating, and dehydration by not allowing sweat to affectively cool the body through evaporation against the skin.

With that mission, TR Gear™ was developed with one primary focus, to increase your performance capabilities by providing your body with the ultimate environment no matter what the condition. That is accomplished by the usage of industry changing fabrics and multi-patented design systems. In order to deliver the best products, all of our designs are tested and approved by world class athletes before they are ever offered to the consumer. During its
